Total Output Power

maximum 80W with 8.6CFM forced air-cooling and 60W convection cooling at 50°C ambient temperature

Note:

- 1) The maximum total combined output power on the +3.3V and +5V rails is 40W
- 2) Measured by a 20MHz bandwidth limited oscilloscope and the each output is connected with a 10uF Electrolytic Capacitor and a 0.1uF Ceramic Capacitor
- 3) The +5V output is set between 5.08V to 5.13V by variable resistor and all output at 60% rated load and the other outputs are checked to be within the accuracy range
- 4) While input voltage below 100V (90-99V), an accessory heat sink or the chassis of application (min. 440 cm², aluminum with 1.5mm thickness) is recommend to be placed at the bottom of the power supply itself
